
Project Instruction

- ▶ Forming the team and selection of the project's topic should be finalized by **March 19**.
- ▶ Each team can either select one topic from the provided list or propose a new topic after consulting with the instructor. Each team should work on a different topic.
- ▶ Students will **present their work** in class (April 24, 29 and May 1). Details about the exact time and duration of the presentation will be determined after the teams are finalized.
- ▶ The goal of the presentation is to share the findings of the project to the class. Therefore, it should be **presented at a high-level**, allowing everyone to understand the main idea easily.
- ▶ Other students are required to listen to the presentations and provide feedback by **filling out a feedback form**, as it will be counted as a **homework assignment**.
- ▶ The final project report is expected to be a **PDF file** (3-5 pages) in a journal format (a template will be provided), describing:
 - What is the problem? Define the optimization problem that you want to solve.
 - Why is it important? For example, what are the applications?
 - What has been done? Conduct a literature review (at least 3 papers/books should be cited) on the existing works and results on this topic. Explain the algorithm, required assumptions, and convergence results. Students in SIE 549, should review at least 5 papers/books.
 - (Required for SIE 549) At least one numerical experiment. Choose a problem and implement the algorithm using a real or synthetic dataset.
 - Conclusion and possible future directions.
- ▶ Final report and the code for the numerical experiment should be submitted by **May 4**.
- ▶ **Handling Inactive Team Members:** If a team member is not fulfilling their responsibilities or is unresponsive, the team should address the issue early on. If they cannot resolve it internally, they must inform the instructor promptly. The instructor may, if necessary, provide alternative arrangements or assignments to ensure the affected team can continue its progress. If the problem persists and is not rectified, the instructor reserves the right to assess individual contributions separately. End-of-semester complaints will not be considered, and the entire team will be penalized for the team member's lack of contribution.
